

How to deploy an Azure Function in VSCode

1. Create an Azure Function in Azure Portal

We login in Azure Portal and navigate to Azure Functions service.

We set the Azure Function name, the runtime stack, version and the deployment region:

The screenshot shows the 'Create Function App' page in the Azure Portal. The left sidebar contains the 'Microsoft Azure' logo, a search bar, and a list of resources including 'Create a resource', 'Home', 'Dashboard', 'All services', 'FAVORITES', 'All resources', 'Resource groups', 'Quickstart Center', 'App Services', 'Function App', 'SQL databases', 'Azure Cosmos DB', 'Virtual machines', 'Load balancers', 'Storage accounts', 'Virtual networks', 'Microsoft Entra ID', 'Monitor', 'Advisor', 'Microsoft Defender for Cloud', and 'Cost Management + Billing'. The main content area is titled 'Create Function App' and has tabs for 'Basics', 'Storage', 'Networking', 'Monitoring', 'Deployment', 'Tags', and 'Review + create'. The 'Basics' tab is active, showing a description of a function app and a 'Project Details' section. The 'Project Details' section includes fields for 'Subscription' (Azure subscription 1), 'Resource Group' ((New) mynewazurefunction1974_group), 'Function App name' (mynewazurefunction1974), 'Runtime stack' (.NET), 'Version' (8 (LTS) Isolated (Early Access)), and 'Region' (West Europe). The 'Do you want to deploy code or container image?' section has 'Code' selected. At the bottom, there are buttons for 'Review + create', '< Previous', and 'Next : Storage >'.

We select the operating system, the hosting option and plan:

Microsoft Azure

Search resources, services, and docs (G+/)

Create Function App ...

Do you want to deploy code or container image? *

☒ Code ☐ Container Image

Runtime stack *

.NET

Version *

8 (LTS) Isolated (Early Access)

Region *

West Europe

Operating system

The Operating System has been recommended for you based on your selection of runtime stack.

Operating System *

☐ Linux ☒ Windows

Hosting

The plan you choose dictates how your app scales, what features are enabled, and how it is priced. [Learn more](#)

Hosting options and plans * ⓘ

☒ Consumption (Serverless)
Optimized for serverless and event-driven workloads.

☐ Functions Premium
Event based scaling and network isolation, ideal for workloads running continuously.

☐ App service plan
Fully isolated and dedicated environment suitable for workloads that need large SKUs or need to co-locate Web Apps and Functions.

The screenshot shows the 'Overview' page for a deployment in the Azure portal. The deployment is named 'Microsoft.Web-FunctionApp-Portal-c592207f-b7a3' and is in a 'Complete' state. The deployment details show it was created on 12/8/2023 at 5:25:14 PM. The subscription is 'Azure subscription 1' and the resource group is 'mynewazurefunction1974_group'. The 'Next steps' section recommends creating a function and managing deployments. The right sidebar shows 'Cost Management' and 'Microsoft Defender for Cloud' options.

The screenshot shows the 'Overview' page for the function app 'mynewazurefunction1974'. The app is in a 'Running' state. The deployment details show it was created on 12/8/2023 at 5:25:14 PM. The subscription is 'Azure subscription 1' and the resource group is 'mynewazurefunction1974_group'. The 'Next steps' section recommends creating a function and managing deployments. The right sidebar shows 'Cost Management' and 'Microsoft Defender for Cloud' options.

The screenshot shows the 'Overview' page for the function app 'mynewazurefunction1974'. The app is in a 'Running' state. The deployment details show it was created on 12/8/2023 at 5:25:14 PM. The subscription is 'Azure subscription 1' and the resource group is 'mynewazurefunction1974_group'. The 'Next steps' section recommends creating a function and managing deployments. The right sidebar shows 'Cost Management' and 'Microsoft Defender for Cloud' options.

The screenshot shows the Azure Portal interface for a Function App named 'mynewazurefunction1974'. The left sidebar contains navigation options like 'Create a resource', 'Home', 'Dashboard', 'All services', and 'FAVORITES'. The main area displays the 'Overview' tab for the Function App. Key details include:

- Resource group:** mynewazurefunction1974_group
- Status:** Stopped
- Location:** East US
- Subscription:** Azure subscription 1
- Subscription ID:** 846901e6-da09-45c8-98ca-7cca2353ff0e
- URL:** https://mynewazurefunction1974.azurewebsites.net
- Operating System:** Windows
- App Service Plan:** ASP-mynewazurefunction1974group-82f3 (Y1:0)
- Runtime version:** 4.27.5.21549

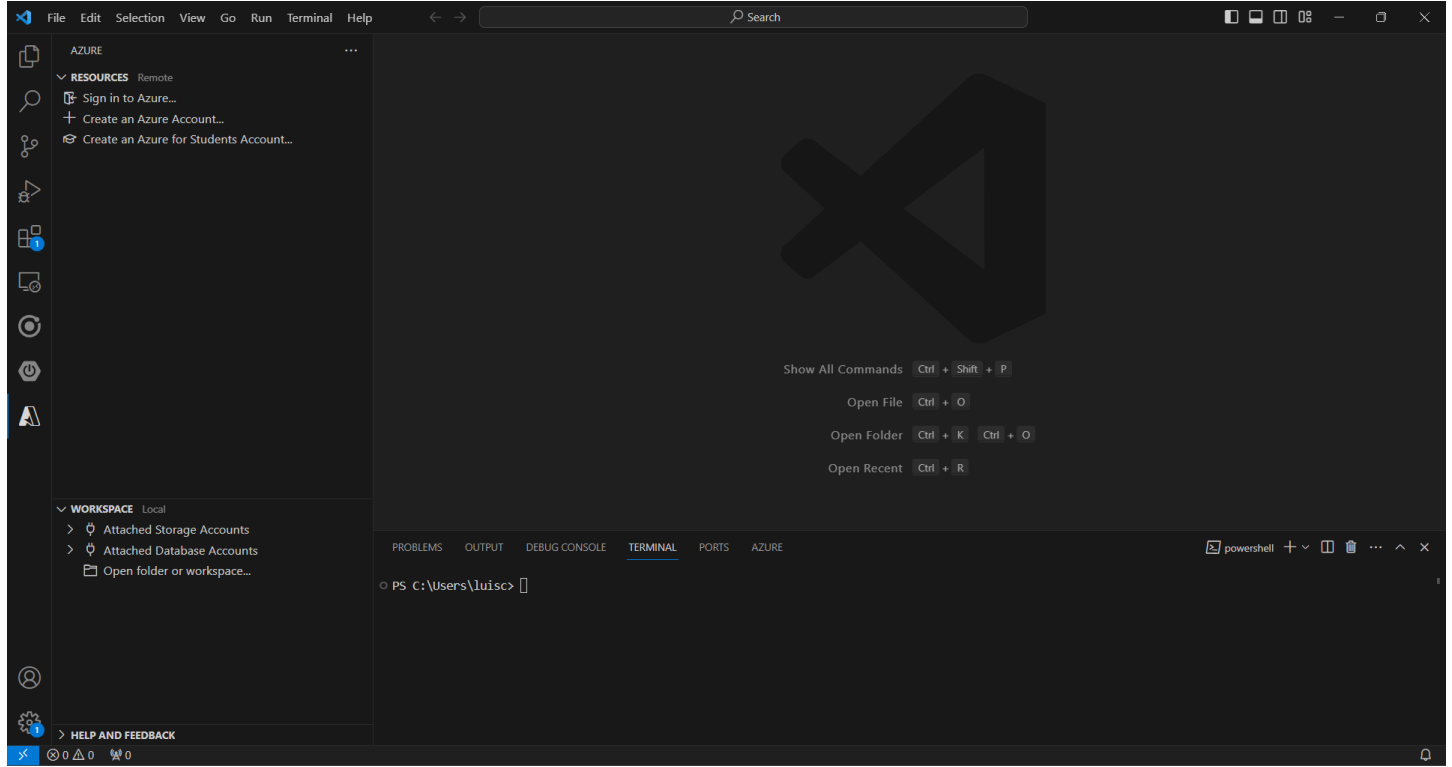

Below the overview, there are tabs for 'Functions', 'Metrics', 'Properties', and 'Notifications (0)'. The 'Functions' tab is active, showing a table with one function:

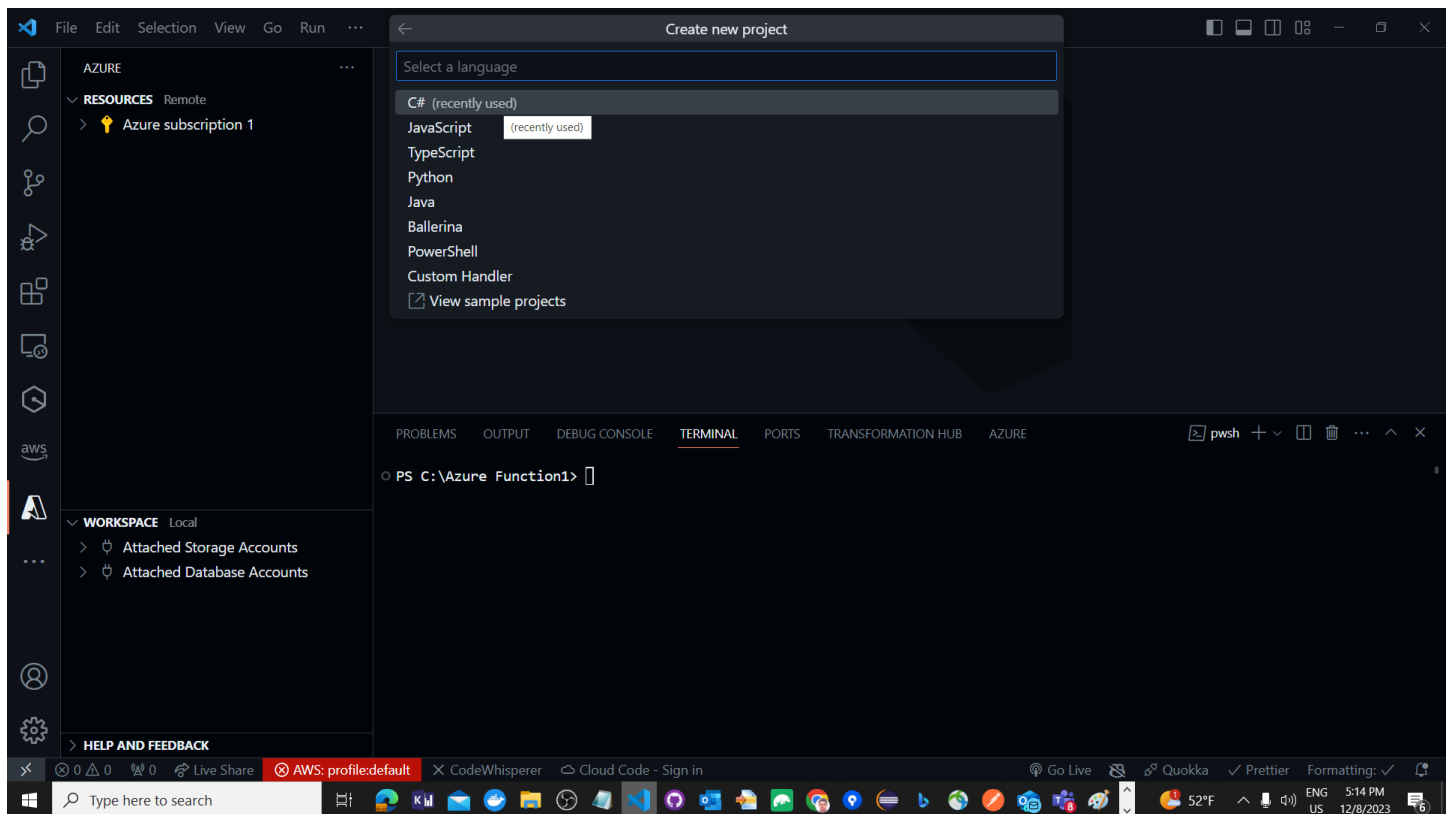

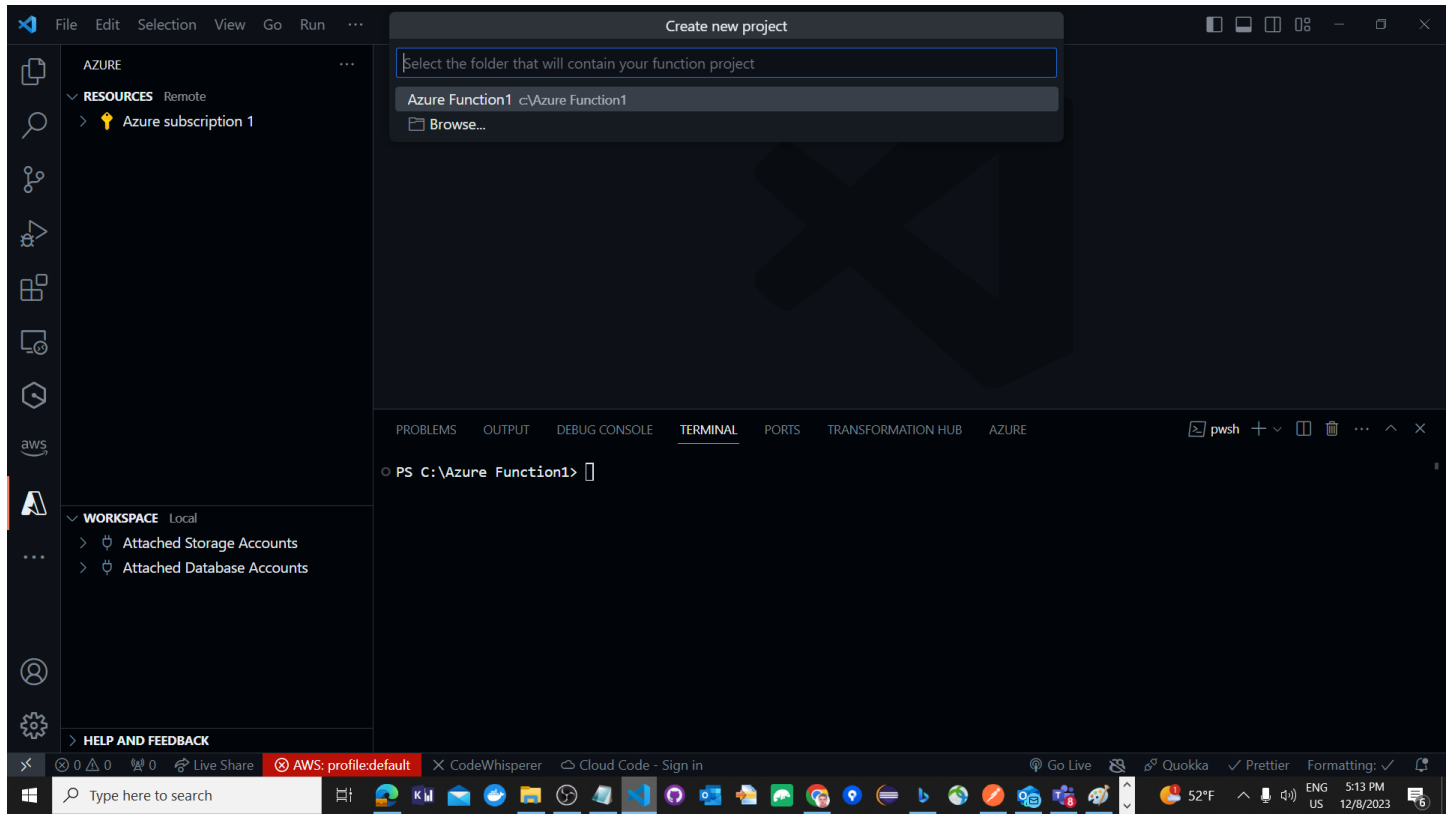

Name	Trigger	Status	Monitor
HttpTrigger1	HTTP	Enabled	Invocations and more

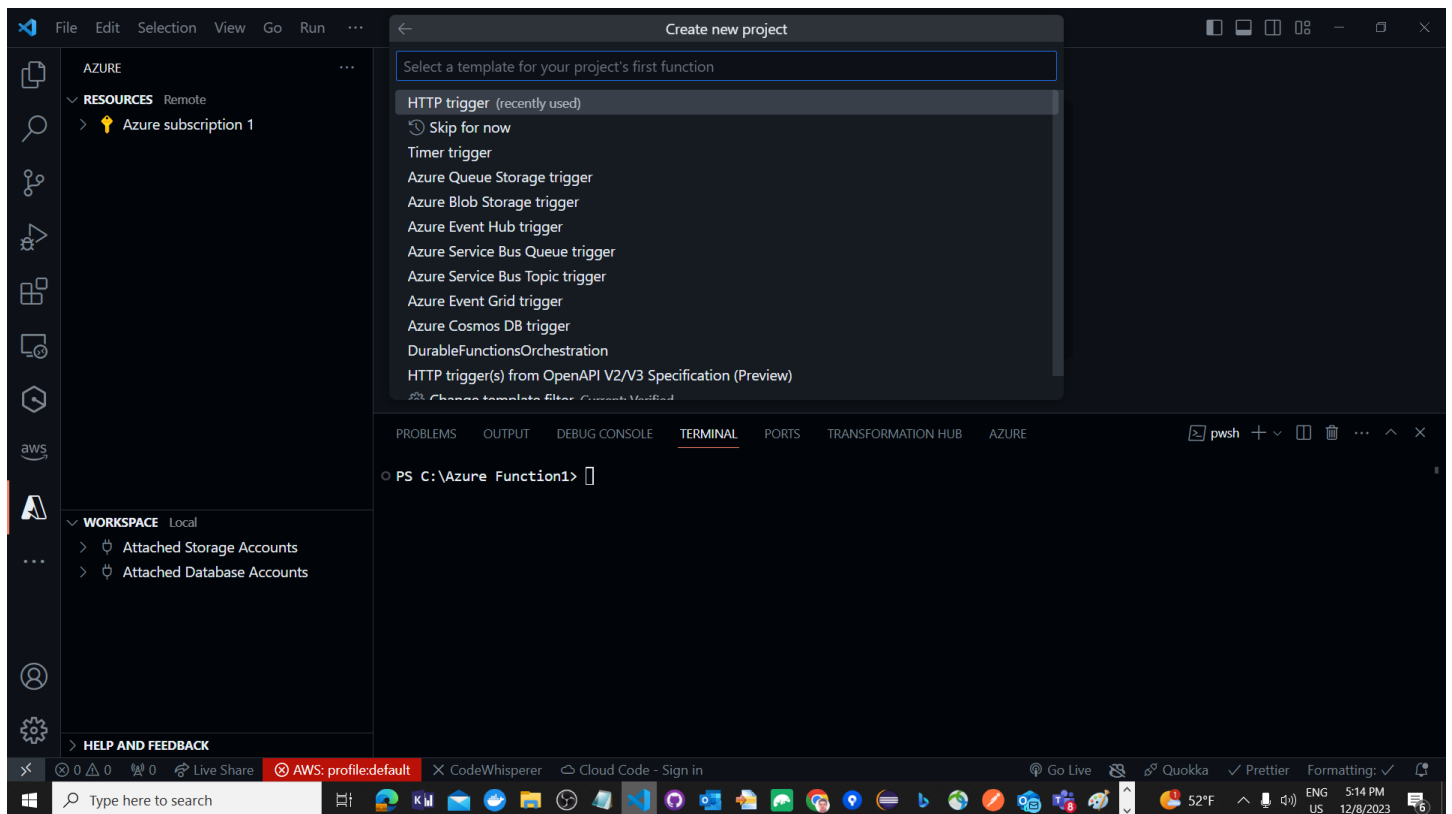

2. Create an Azure Function in VSCode

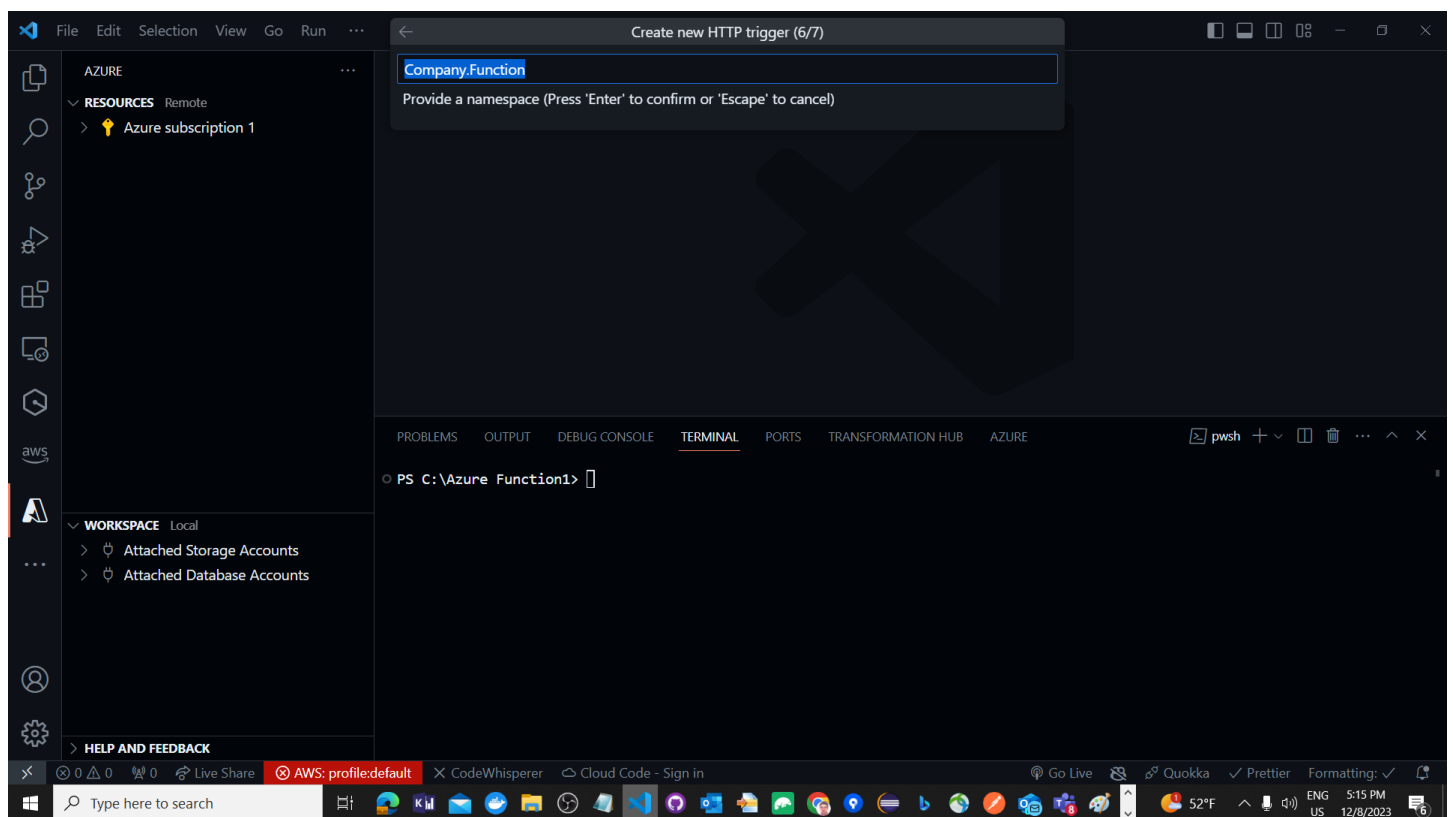

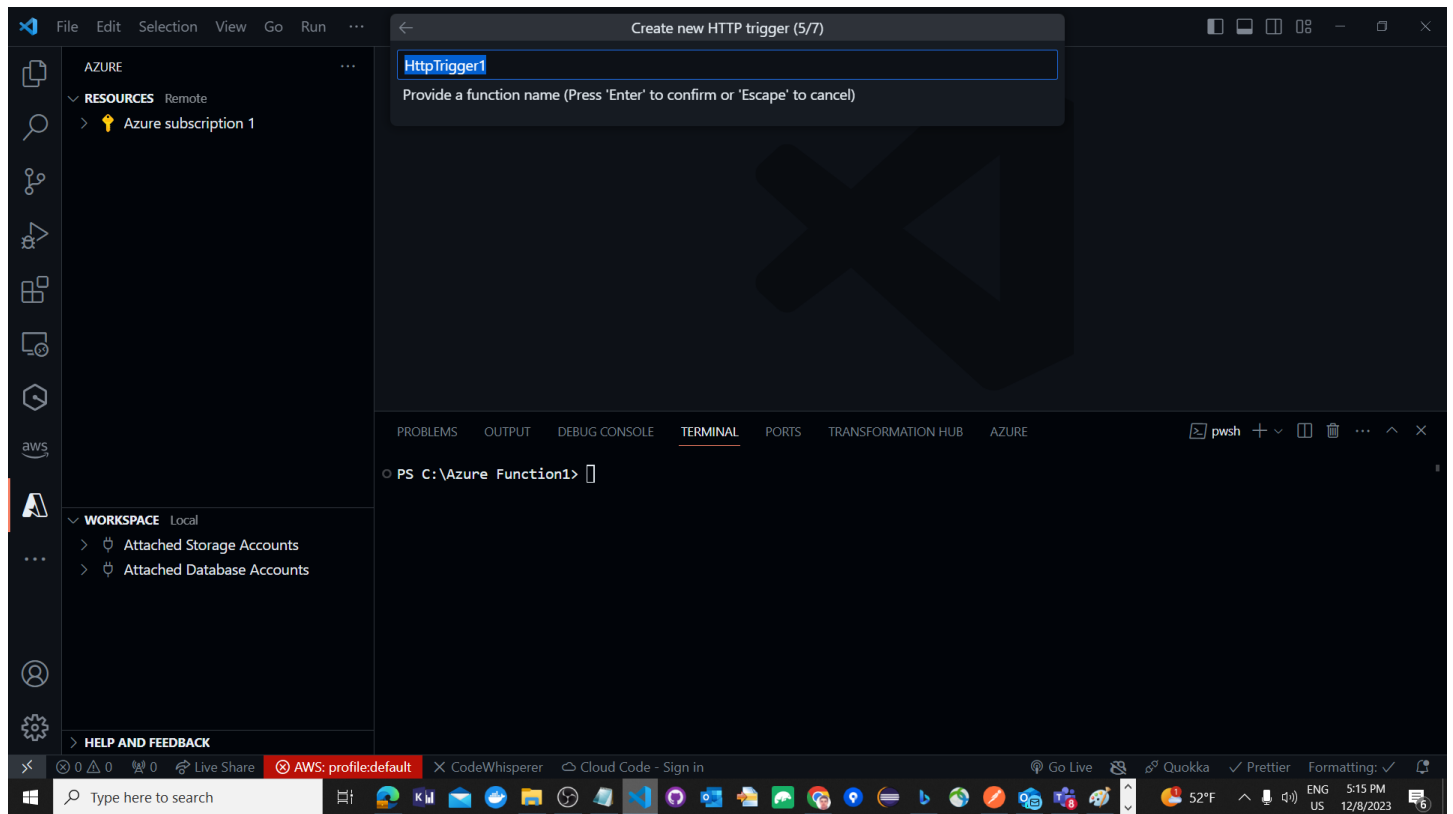

After creating the Azure Function in the Azure Portal, we open VSCode and we create an Azure Function Http triggered:

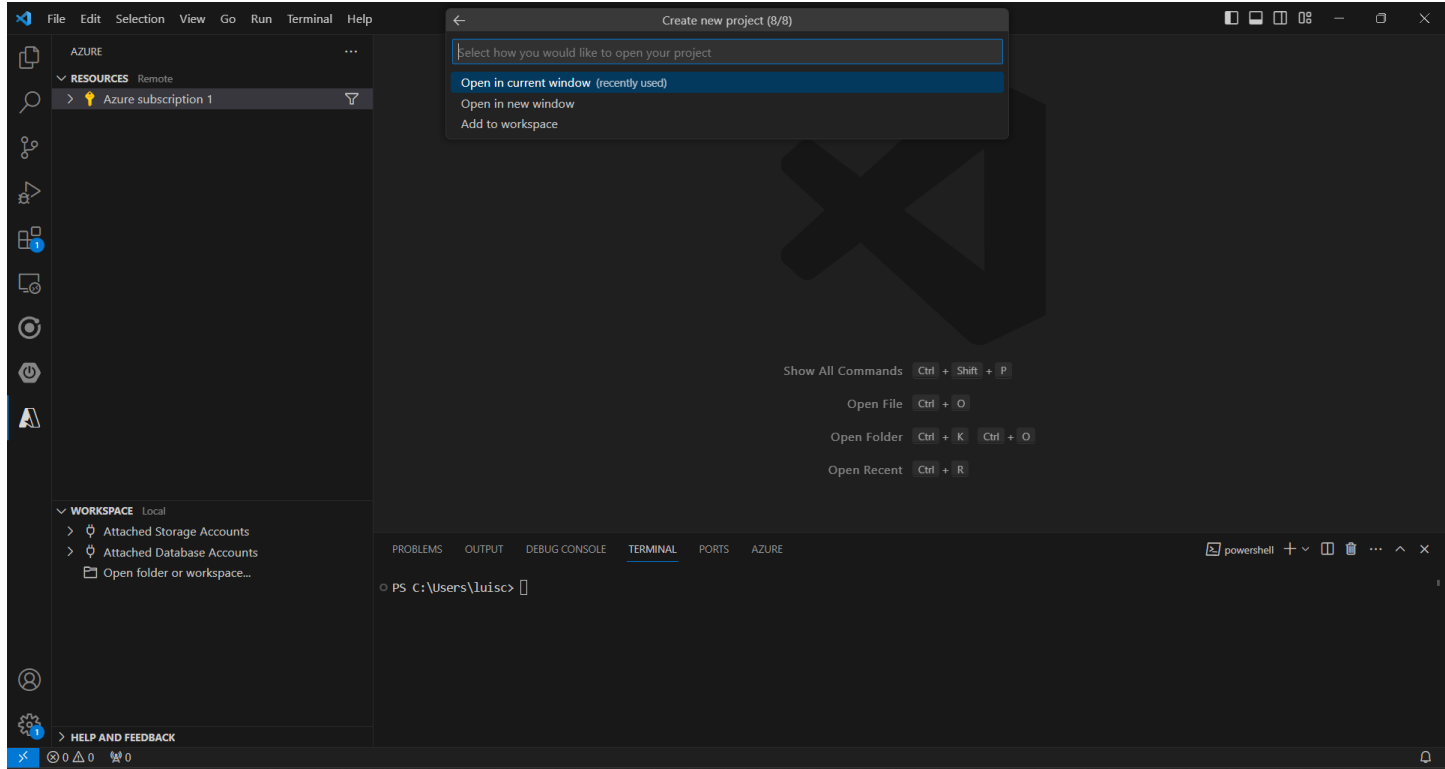

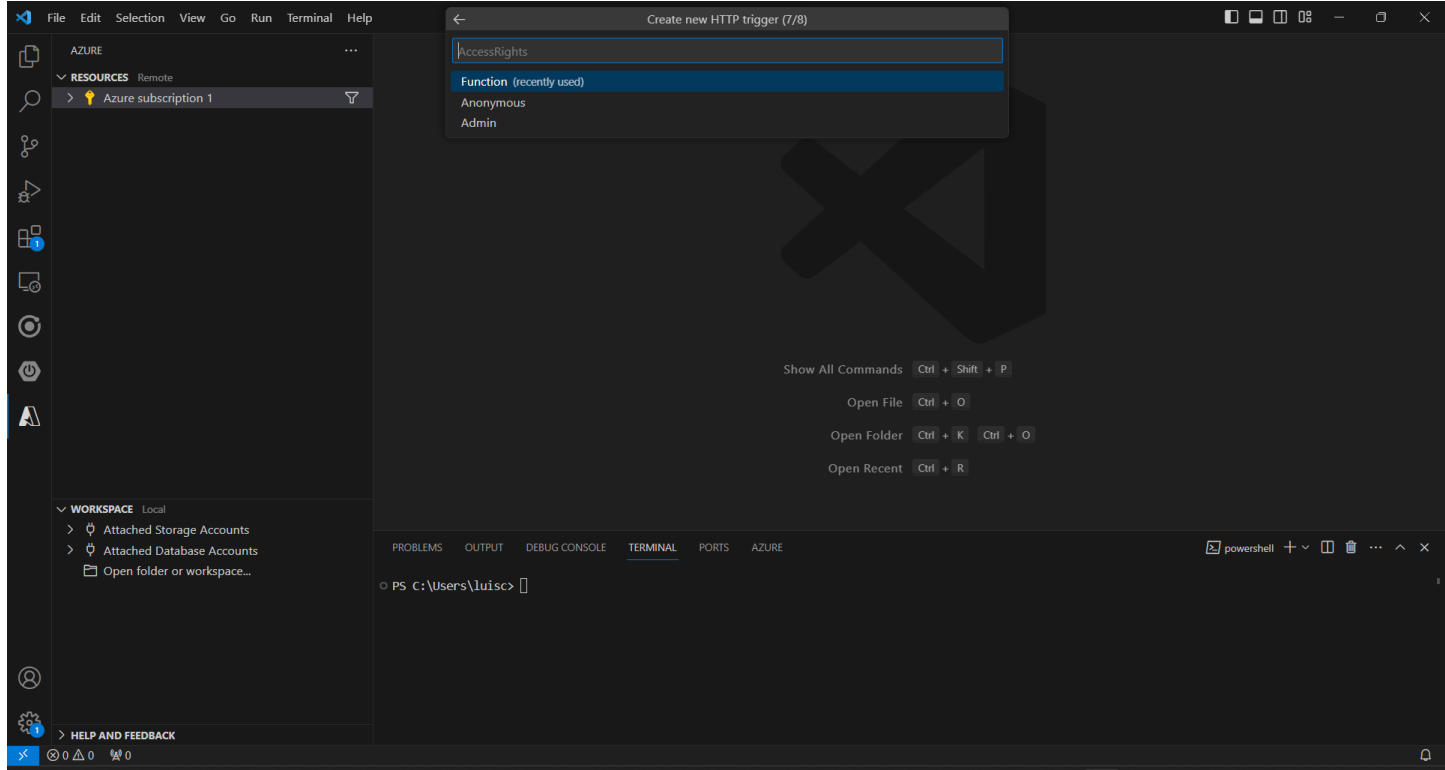

The screenshot shows the VS Code interface with the Explorer sidebar on the left. The 'AZURE FUNCTION1' folder is expanded, and a context menu is open, highlighting the 'Azure' option. The menu also includes options like 'Kubernetes', 'Database Projects', 'SQL Server', 'Metals', 'Live Share', 'Thunder Client', 'CodeSandbox', 'Cloud Code', and 'Chat'. The main editor area is currently blank, displaying a large VS Code logo watermark. The bottom status bar shows various extensions and the current file path.
